

# Data Warehouse dan Stored Procedure

ID/X Partners - Data Engineer

Presented by  
Irpan Maulana

# Irpan Maulana

Hi, I'm a graduate of informatics engineering and I'm a data enthusiast. I have a strong interest in continuing to hone my skills in the data field. I've completed several data science training courses and am currently trying to get into data engineering.

## About ID/X Partners

ID/X Partners is a consulting firm specialising in information technology solutions. specialising in leveraging data analytics and decision making (DAD) solutions combined with risk management and integrated marketing disciplines to help clients optimise portfolio profitability and business processes

# Case Study

Salah satu client dari perusahaan ID/X Partners yang bergerak di industri perbankan, memiliki kebutuhan untuk membuat sebuah Data Warehouse dari beberapa sumber data yang berbeda yang tersimpan di dalam sistem mereka.

Permasalahan yang mereka hadapi saat ini adalah mereka kesulitan untuk mengekstrak data dari berbagai sumber (excel, csv, database) secara bersamaan sehingga pelaporan dan analisis data mereka selalu mengalami keterlambatan

**01**

## Membuat Database

Membuat database baru yang akan kita anggap sebagai Data Warehouse dan membuat 3 tabel dimension

**02**

## Job ETL Dimension Table

Membuat job ETL di aplikasi talend untuk memindahkan data dari source ke seluruh tabel Dimension

**03**

## Job ETL FactTransaction

Membuat job ETL untuk menggabungkan data transaksi menjadi satu di tabel FactTransaction

**04**

## Stored Procedure

Membuat dua Stored Procedure (SP) dengan parameter, untuk membantu mereka mendapatkan ringkasan data dengan cepat

# Outline

01

Data Warehouse  
Creation

02

Create ETL Job For  
Dimension Table

03

Create ETL Job For  
Fact Table

04

Create Stored  
Procedure

The background is a solid purple color. On the left side, there are several decorative geometric elements: a large dark purple diamond shape in the top left corner, a series of concentric light blue diamonds, a small dark purple diamond, and a series of parallel lines forming a diamond shape. In the bottom left, there is a large, multi-lined diamond shape.

01

# Data Warehouse Creation

# Restore Database

Merestore Database yang akan digunakan sebagai source dan berisikan 6 tabel

- transaction\_db
- account
- branch
- customer
- city
- state

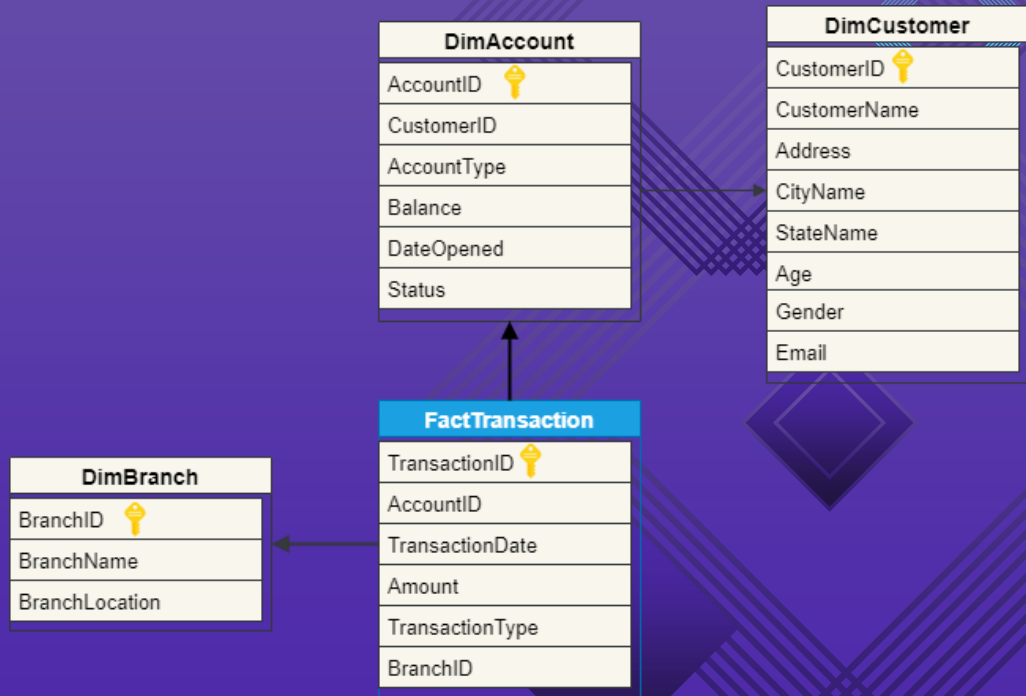

# Create Database

Membuat Database bernama DWH sebagai Data Warehouse dan berisi 3 tabel dimension dan 1 tabel fact

- DimCustomer
- DimAccount
- DimBranch
- FactTransaction

# Query Dimension and Fact Table

## Dimension Customer Table

```
CREATE TABLE DimCustomer(  
  CustomerID INT NOT NULL,  
  CustomerName VARCHAR(50),  
  Address VARCHAR(Max) NULL,  
  CityName VARCHAR(100),  
  StateName VARCHAR(100),  
  Age VARCHAR(3) NULL,  
  Gender VARCHAR(10) NULL,  
  Email VARCHAR(50) NULL,  
  PRIMARY KEY(CustomerID)  
);
```

## Dimension Branch Table

```
CREATE TABLE DimBranch(  
  BranchID INT NOT NULL,  
  BranchName VARCHAR(50) NULL,  
  BranchLocation VARCHAR(50) NULL,  
  PRIMARY KEY(BranchID)  
);
```

## Dimension Account Table

```
CREATE TABLE DimAccount(  
  AccountID INT NOT NULL,  
  CustomerID INT NULL,  
  AccountType VARCHAR(10) NULL,  
  Balance INT NULL,  
  DataOpened DATETIME2(0) NULL,  
  Status VARCHAR(10) NULL,  
  PRIMARY KEY(AccountID),  
  FOREIGN KEY (CustomerID) REFERENCES  
  DimCustomer(CustomerID)  
);
```

## Dimension Fact Transaction Table

```
CREATE TABLE FactTransaction(  
  TransactionID INT NOT NULL,  
  CustomerID INT NULL,  
  AccountID INT NULL,  
  Amount INT NULL,  
  TransactionDate DATETIME2(0),  
  Transaction_type VARCHAR(50) NULL,  
  BranchID INT NULL,  
  PRIMARY KEY(TransactionID),  
  FOREIGN KEY (AccountID) REFERENCES  
  DimAccount(AccountID),  
  FOREIGN KEY (BranchID) REFERENCES  
  DimBranch(BranchID)  
);
```

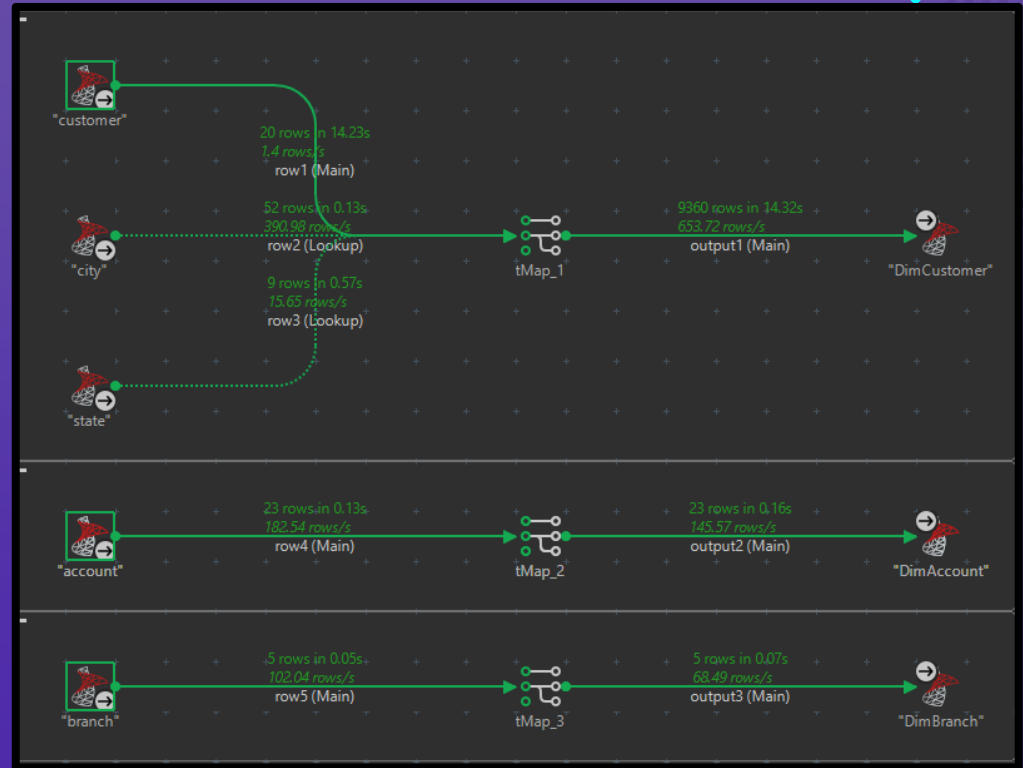

The background is a solid purple color. It features several decorative geometric patterns. On the left, there are concentric squares and diamonds in shades of blue and purple. On the right, there are more complex patterns, including a large diamond shape composed of many thin lines, and a smaller diamond shape with a blue-to-purple gradient. The overall design is modern and tech-oriented.

# 02

## Create ETL Job For Dimension Table

# Dimension Job

Membuat Job ETL untuk memindahkan Data dari source yang ada di db hasil restore database masuk tMap untuk di proses lalu output dari tMap masuk ke Dimension Tabel

# tMap DimCustomer

Khusus untuk DimCustomer kolom CustomerName, Address, CityName, StateName pada tMap data dari source di ubah menjadi kapital dan Kolom CustomerID, Age, Email di ubah mengikuti kaidah PascalCase dengan menambahkan Ekpression pada Tabel Output

The screenshot displays the Talend tMap configuration for the DimCustomer table. The interface is divided into three main sections: input rows, a central 'Find' and 'Var' section, and an output table.

**Input Rows:**

- row1:** Contains columns: customer\_id, customer\_name, address, city\_id, age, gender, email.
- row2:** Contains columns: city\_id, city\_name, state\_id.
- row3:** Contains columns: state\_id, state\_name.

**Central Section:**

- Find:** A search bar.
- Var:** A variable declaration section.

**Output Table (output1):**

Expression	Column
row1.customer_id	CustomerID
StringHandling.UPCASE(row1.customer_name)	CustomerName
StringHandling.UPCASE(StringHandling.EREPLACE(Stri...	Address
StringHandling.UPCASE(row2.city_name)	CityName
StringHandling.UPCASE(row3.state_name)	StateName
row1.age	Age
StringHandling.UPCASE(row1.gender)	Gender
row1.email != null && row1.email.length() > 0 ... ? r...	Email

# Output Dimension Job

## DimCustomer

	CustomerID	CustomerName	Address	CityName	StateName	Age	Gender	Email
1	1	SHELLY JUWITA	JL. BOULEVARD NO. 31	SUKATANI	BEKASI	25	FEMALE	Shelly@gmail.com
2	2	BOBI RINALDO	JL. MANGGA NO. 1	SUKATANI	BEKASI	31	MALE	Bobi@gmail.com
3	3	ADAM MALIK	JL. KINCIR ANGIN NO. 50	SUKATANI	BEKASI	23	MALE	Adam@gmail.com

## DimAccount

	AccountID	CustomerID	Account Type	Balance	DataOpened	Status
1	1	1	saving	1500000	2020-05-01 09:00:00	active
2	2	2	saving	500000	2020-06-01 10:00:00	active
3	3	1	checking	25000000	2020-06-21 09:00:00	active

## DimBranch

	BranchID	BranchName	BranchLocation
1	1	KC Jakarta	Jl. Gatot Subroto No 13
2	2	KC Bogor	Jl. Padjajaran No 43
3	3	KC Depok	Jl. Raya Sawangan No 34

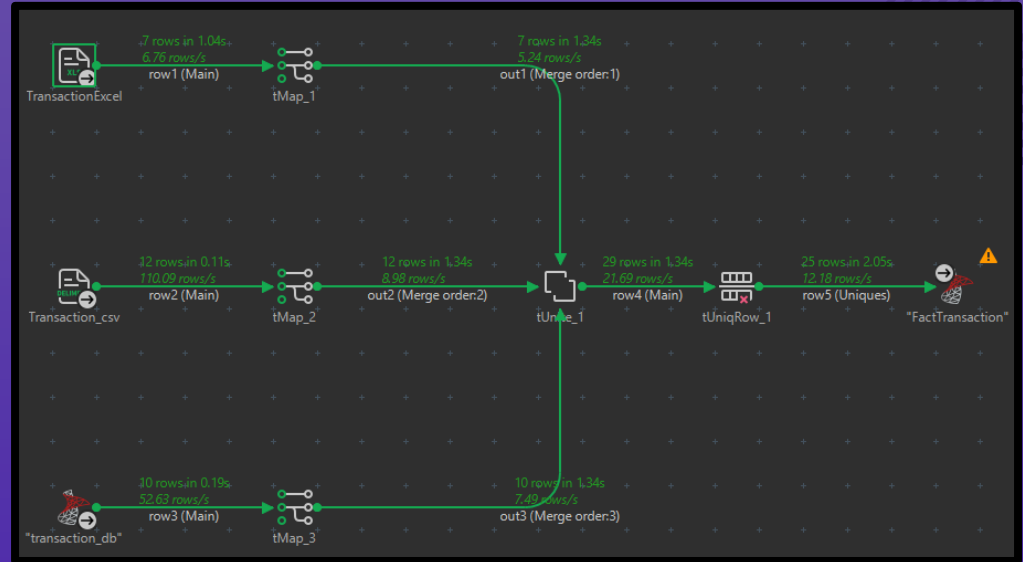

03

Create  
**ETL Job**  
for **Fact Table**

# Fact Transaction Job

Membuat Job ETL untuk menggabungkan Data dari 3 source berbeda yaitu Excel, Csv dan DB.

Pada Fact Job ini komponen yang digunakan yaitu komponen tMap untuk memproses data dari data input, lalu komponen tUnite untuk menggabungkan data dari ke 3 source berbeda dan komponen tUniqRow untuk data yang duplikat

# Output Fact Job

FactTransaction

	TransactionID	AccountID	Amount	TransactionDate	Transaction_type	BranchID
1	1	1	100000	2024-01-17 09:10:00.000	Deposit	1
2	2	2	1000000	2024-01-17 10:10:00.000	Deposit	1
3	3	3	10000000	2024-01-18 08:30:00.000	Transfer	1
4	4	3	1000000	2024-01-18 10:45:00.000	Withdrawal	1
5	5	5	200000	2024-01-18 11:10:00.000	Deposit	1

data dari ke 3 source yang berbeda memiliki beberapa data yang sama dan menggunakan komponen tUniq Row sehingga data yang masuk ke tabel FactTransaction tidak ada yang data duplikat

# 04

## Create Stored Procedure

# Daily Transaction

Menghitung banyaknya transaksi beserta total nominal setiap harinya dengan kolom yang di tampilkan

- Date
- TotalTransaction
- TotalAmount

Menjalankan Store Procedure ini dengan dua parameter yaitu start\_date dan end\_date untuk menampilkan data berdasarkan rentang tanggal yang di masukan

## Query SP Daily Transaction

```
CREATE PROCEDURE DailyTransaction
    @start_date DATE,
    @end_date DATE
AS
BEGIN
    SELECT
        CONVERT(DATE, TransactionDate) AS [Date],
        COUNT(TransactionID) AS TotalTransactions,
        SUM(Amount) AS TotalAmount
    FROM
        FactTransaction
    WHERE
        TransactionDate BETWEEN @start_date
        AND @end_date
    GROUP BY
        CONVERT(DATE, TransactionDate)
    ORDER BY
        [Date] ASC;
END
```

# Output Daily Transaction

Menjalankan Stored Procedure Daily Transaction dengan memasukan 2 parameter start\_date dan end\_date

Dapat dilihat di bawah ini parameter start\_date di isi dengan '2024-01-17' dan end\_date di isi dengan '2024-01-19' serta outputnya pada gambar di samping

	Date	TotalTransactions	TotalAmount
1	2024-01-17	2	1100000
2	2024-01-18	4	11250000
3	2024-01-19	3	5400000
4	2024-01-20	4	4000000

```
EXEC DailyTransaction '2024-01-17', '2024-01-19';
```

# Balance PerCustomer

Untuk mengetahui sisa balance per customer dengan kolom yang di tampilkan :

- CustomerName
- AccountType
- Balance
- CurrentBalance

Menjalankan Store Procedure ini dengan parameter customer\_name untuk menampilkan data berdasarkan nama customer yang di masukan

## Query SP Balance PerCustomer

```
CREATE PROCEDURE BalancePerCustomer
    @customer_name NVARCHAR(255)
AS
BEGIN
    SELECT
        DC.CustomerName,
        DA.AccountType,
        DA.Balance,
        (DA.Balance + ISNULL(SUM(CASE
            WHEN FT.Transaction_type = 'Deposit' THEN
                FT.Amount
            ELSE -FT.Amount
        END), 0)) AS CurrentBalance
    FROM
        DimCustomer DC
    INNER JOIN
        DimAccount DA ON DC.CustomerID = DA.CustomerID
    LEFT JOIN
        FactTransaction FT ON DA.AccountID = FT.AccountID
    WHERE
        DC.CustomerName = @customer_name
        AND DA.Status = 'Active'
    GROUP BY
        DC.CustomerName, DA.AccountType, DA.Balance
    ORDER BY
        DC.CustomerName, DA.AccountType;
END
```

# Output Balance PerCustomer

Menjalankan Stored Procedure Daily Transaction dengan memasukan parameter customer\_name

Dapat dilihat di bawah ini parameter customer\_name di isi dengan 'SHELLY JUWITA' serta outputnya pada gambar di samping

	CustomerName	AccountType	Balance	CurrentBalance
1	SHELLY JUWITA	checking	25000000	14000000
2	SHELLY JUWITA	saving	1500000	1600000

```
EXEC DailyTransaction 'SHELLY JUWITA';
```

# Thanks!
